

DECISIONS

Alcohol Awareness & Education™

College Edition

Help students make educated decisions about their relationship with alcohol!

This one-hour course educates students on the science of alcohol, environmental impacts, drug interactions, and bystander intervention strategies. Grounded in the Social Ecological Model of prevention, students will examine their beliefs about the appropriate use of alcohol and examine how they are influenced by their peers.

After completing this course, students will be able to:

Develop and carry out a plan to drink safely, if and when they drink

Promote a healthy and safe culture surrounding the use of alcohol

Identify expectations related to alcohol consumption

Examine their own motivations related to alcohol consumption

Articulate the effects of alcohol on themselves or others

Recognize how alcohol could interact with other drugs

Identify & intervene when a person has overconsumed – or is about to

Authored by researchers on college student drinking behavior and student affairs professionals, this course meets the requirements for alcohol education.

Decisions: Alcohol Awareness and Education is destined to be the premier alcohol education course for college students. Grounded in a social ecological approach, the course both educates and challenges students to consider drinking in a thoughtful, planned and informed manner.
